

IT CONSULTING SINCE 1990

For over 30 years, our family business has provided managed IT services to our local California communities. From internet security to wired or wireless networking, our trusted team of experts provides full-service, personalized care for small to medium-sized organizations in education, government, healthcare and other verticals.

Our core values of honesty and integrity are inherent in our customer-focused, agile approach to managed IT services. For us, no job is too big or too small. We take pride in our ability to offer accurate start-to-finish timeliness and affordable pricing. Contact us today for a quick, free consultation and learn how we can help maximize your organization's productivity with our customized IT solutions.

WHY CHOOSE US?

As a certified Cisco Premier Partner, Cybertek ensures that all of their engineers are knowledgeable of all solutions, and many hold certifications in CCNA Wireless, CCNA Data Center and CCNA Security. Whether we are providing Cisco products, physical work or both, our staff is trained to accomplish the job based on your goals and desired outcome.

IT SOLUTIONS

The Latest in Network Infrastructure, Cybersecurity and Data Center Technology

Cybertek is a systems integrator offering a wide range of solutions and services for today's organization in cybersecurity, data center services, wireless network infrastructure — among many others.

Our Cisco-certified staff understands the ins and outs of a range of technologies and techniques. We're capable of monitoring your organization's network environment for performance and intrusions, providing seamless and low-latency backup services, or upgrading your network infrastructure to take advantage of advanced cloud-based technologies.

CYBERSECURITY

A massive rise in mobile device usage and the steady growth of cybersecurity threats has effectively weakened organizational defense worldwide. Our managed, professional, and consulting services will ensure that your network infrastructure and sensitive data remain undisturbed from the latest cyberthreats. Our security experts can leverage a variety of approaches and world-class Cisco technology—from Cisco Advanced Malware Protection to proactive threat hunting, and rapid incident response—to make sure you're prepared in the event of a breach.

DATA CENTER SERVICES

A host of vital considerations makes data storage and backup decisions difficult. Proximity boosts speed, but it's unwise to have all your data in one building. Cloud providers offer rock-bottom costs, but are often distant and less responsive. Our data center is the perfect data storage and backup solution for organizations in the Southern California area. Regardless of your data center needs, our services will help your organization stay secure and maintain operations should the unexpected occur.

WIRELESS SERVICES

Today's technology demands your office network be wireless. And a plethora of ongoing trends have placed greater strain on your network infrastructure, including a growing volume of mobile devices, the increasing popularity of cloud services and their distinct network requirements — all on top of rising expectations for remote work accessibility. Whether you're hoping to unify disparate office branches on the same network, considering a relocation, or looking to upgrade your download and upload speeds, our wireless products and managed services are designed to improve the functionality of your organization.
